## NOTE ON THE CONSTRUCTION OF THE TABLE.

This table was constructed by means of the following theorem, which is easily proved:-
'The difference of two reciprocals, divided by the difference of the corresponding numbers, is the reciprocal of the product of those numbers.

Hence, when the difference of the numbers is unity, the divisor is also unity, and we may say, that

The difference of the reciprocals of two numbers that differ by unity is the reciprocal of the prodnct of those numbers.

For instance, the reciprocal of 2 is 0.5 , and the reciprocal of 8 is 0.125 , and $\frac{0.5-0.125}{6}=\frac{0.375}{6}=0.0625$ which is the reciprocal of $2 \times 8=16$.

Again, the reciprocal of 4 is 0.25 , and the reciprocal of 5 is 0.2 , and the difference of these is 0.05 , which is the reciprocal of $4 \times 5=20$.

For large numbers the arithnetical process here indieated would be inconvenient, but this difficulty is overcome by the following expedient:-

The quantities we seek are not the products but the reciprocals of products. We have, therefore, $n 0$ need to determine the products, and may substitute for them their logarithms, the complements of which will be the logarithms of their reciprocals. Further, we may by a modification of the logarithmic process find at once these complements, and then, by extracting the corresponding umbers, obtain the required series of differences. Thus, begiming suppose with the reciprocal of 62500 , we write in the left hand margin the complement logarithms of 62500 and 62501 , each to 7 places, and without indexes. The sum of these is an initial value, to which adding the differences of the logs. of 62499 and 62501 , or, in general, the difference of the logarithms of $(n-1)$ and $(n+1)$, we readily obtain the logarithms of the difference required, and of the successive differences. The mumerieal differences being then taken out, the reciprocals of the mmbers are obtained by summation.

In this way the computation was carrich down from the higher numbers; first, because the differences are thus made additive; and, secondly, because by donbling and redoubling
the higher reciprocals, those of the half and quarter numbers may be fomnd, and a considerable amount of work be saved. This is shown in the right hand colum, the quarters being in Roman figures.

To prevent error, the co-logarithms were checked independently at each 50 th term. In taking out the mmbers, the progression of their differences was kept in view, so that no material error could occur. The summation of the differences was checked at every 10th term by a subordinate summation and by comparison with Barlow's tables; and wherever the 7 th figure could be uncertain, it was determined by actual division. Finally, every 100th term was computed by division. The whole of the calculations were performed in duplicate, and when the proofs were set up from one mannseript they were read with the other, and sceond and third proofs were also each examined by addition of the printed differences, and by comparison with Barlow's table at each loth term. Lastly, the proofs were again examined, and the whole table virtually recomputed by summation on the arithmometre of M. 'Thomas de Colmar. All due care las thus been taken to render the table correct.
"The table of reciprocals above described is. as far as I know, ti.e largest which has ever been attempted. It is a very useful table, and its applications are far too little known and thought of. From what I have scen of Col. Oakess proceedings, I have no ưout that the table will be found worthy of the best attention of calculators of all kirds.
" University College, Oct. 1, 1864.

[^0]
# DESCRIPTION OF AND USES OF THE TABLE. 

IF $\frac{1}{n}=r$, then also $\frac{1}{r}=n$. In this case $r$ is termed the reciprocal of $n$. But $n$ is no less the reciprocal of $r$, and in using the Table this reciprocity should be kept in mind.
lure arithmetic involves two and only two distinct operations, mamely, addition and subtraction. Other two processes, familiarly known as multiplication and division, are merely short methods of continually adding or subtracting a constant number. If addition and subtraction were to all minds equally facile, there would be no use in substituting the one for the other; but expericuce has shown that subtraction is more difficult than addition, and that the difficulty is considerably increased when subtraction is extended into division.

Since $\frac{m}{n}=\frac{1}{n} m$, it appears that if $\frac{1}{n}=r$ were given, then $\frac{m}{n}=m r$ could be found by multiplication instead of by division. This is the first and perhaps the most frequent use of a table of reciprocals, for if $\frac{m}{n}$ be a vulgar fraction, then $m r$ is the corresponding decimal fraction, which is a transformation often required.

The ralues of $n$ being general, those of $\frac{1}{n}$ are also general, and consequently $\frac{1}{n}$ may express any number whatsoever. But in the only tables of reciprocals known to the writer $n$ is made an integer and $r$ a decimal fraction. In the present Table this limitation is not imposed, and the position of the decimal point must therefore be determined by the conputer in accordance with the quantities in hand.

Of number and reciprocal when the only significant figure in the one is a single mit, this is also the only significant figure in the other; and, including the unit's place on the left of the decimal point, the order of position is merely inverted. Thus, if the number be 10, the reciprocal is $0 \cdot 1$; and if the reciprocal be 0.001 , the number is 1,000 . In all uther cases

The figure having in each the gratest local valee, is placed at an equal distance from the decimal point, and on opposite sides of it.

In other words, with exceptions as above, the reciprocal of a whole number is always a decinal fraction, laving immediately following the decimal poiut one cipher less than there are digits in the whole number. The reverse of this holds for the reciprocal of a decimal fraction.

Thus, if the number be 125 , the reciprocal is 008 ; or if the number be 800 , the reciprocal is 00125.

The arrangement of the Table, and consequently the manner of using it, are similar to those of the ordinary tables of logarithms. Only here, in direct order, the differences are subtractive, because, as numbers increase, their reciprosals decrease. The following examples will afford sufficient explanation:-

If the number be less than 1,000 find the number foilowed by one or more ciphers in the margin; its reciprocal will then be found in the column headed 0 , and the decinal point must be supplied by the rule already given.

If the uumber be 1,000 and under 10,000 , its reciprocal will be found in the column headed 0 .

If the number be 10,000 and under 100,000 , find the first four figures in the margin, then on a line with these, and in the column headed by the last figure, the reciprocal will be found.

If the number be 100,000 and under $1,000,000$, find for five figures as in the last ease, and for the sixth figure subtract the difference corresponding thereto as piven in the tablet of proportional narts.

If the number consist of seven fignres, then one-tenth of the difference corresponding to the $\boldsymbol{i}$ th figure must also be subtracted.

The differences may be made additive by taking the reciprocal next above that belonging to the first five fignres, and using the complements of the sixth and seventh figures.

1. Required the reciprocal of 153 .

Opposite 1530 , in Col. 0 , we find 6535948 , and the first figure of the number being in the third place on the left of the decimal point, the first significant figure of the reciprecal must be in the third decinal place. The reciprocal of 153 is, therefore, $\cdot 006535948$.
2. Required the reciprocal of 1532 .

Opposite 1532 , in Col. 0 , we find 6527415 , and hence $\frac{1}{1532}=\cdot 0006527415$.
3. Required the reciprocal of 15326.

On line with 1532, and in Col. 6, we find 6524860; hence $\frac{1}{15326}=00006524860$.
4. Required the reciprocal of $15 \cdot 326$.

On line with 1532 , and in Col. 6, we find 6524860 ; hence $\frac{1}{15 \cdot 32 \mathrm{C}}=\cdot 06524860$.
5. Required the reciprocal of $0 \cdot 153265$.

As before, for 15326 we find 6524860
Sultract prop. part fur 5
-213
$\overline{6524647}$
Hence $\frac{1}{0 \cdot 153265}=6.524647$.
6. Required the reciprocal of 1532657 , the position of the decimal point being undetermined.
Here the prop. parts for 5 and 7 being $-(213+30)=-243$, we have 6524860 $-243=6524617$ for the value sought. We might also, by taking the next value in the Table, and using the complements 43 of the final figures 57 , obtain $6524434+183$ $=6524617$, as before.

The uses of the Table are so mumerons, that a full exposition of them would excee? the bounds of a Preface.

1. The present value of an annuity on a siugle life is $7 \cdot 476$, at 6 per cent. Required the amual premium for an assurance on the same life.

This is $\frac{1}{1+a_{z}}-(1-v)$; hence $\frac{1}{8 \cdot 476}=11798$

$$
(1-v)=\frac{.05660}{\cdot 06138}(a \text { constant })
$$

and if the sum assured were $\mathfrak{f 1 0 0}$, the amnual prenium would be $6 \cdot 138$.
2. Express 3 qre. 11 lb .9 oz . as a decimal of 1 cwt .

This fraction of 1 cwt . is in ounces $\frac{1529}{1792}$

Hence

$$
\frac{1}{1792}=\cdot 00055804
$$

multiplier reversed

$$
9251
$$

$$
55804
$$

27902
1116
502
the required decimal is

- 85324

3. Find the sum of the fractions $\frac{1}{257}, \frac{1}{3756}$, and $\frac{1}{31}$.

$$
\begin{array}{rlrl}
\text { leciprocal of } 957 & =\cdot 00389105 \\
" & 3756 & =00026624 \\
" & 31 & =03225806
\end{array}
$$

Sum of the fractions $=03641535$
which, by inverse use of the Table, is found to be $\frac{1}{27 \cdot 46}$ nearly.
4. From $\frac{1}{21}$ take $\frac{1}{257}$.

$$
\begin{aligned}
\text { Reciprocal of } 31 & =03225806 \\
" \quad 257 & =00389105 \\
\text { Difference of the fractions } & =.02836701
\end{aligned}
$$

5. To $\frac{3}{31}$ add $\frac{7}{257}$.

$$
\begin{aligned}
\frac{1}{2} \times 3 & =006677418 \\
\frac{1}{25} \times 7 & =02723735 \\
\text { Sum of the fractions } & =12401153
\end{aligned}
$$

6. Find the reciprocal of $36 \frac{5}{7}$.

Clearing the fraction, we inave $\frac{1}{36 \frac{5}{7}}=\frac{7}{257}=\frac{1}{257} \times 7=\cdot 02723735$, as in the last exaniple.
7. Given $D_{25}=152 \cdot 567$, and $N_{25}=3217.84$ (English Life 'lable No. 3, Males, 3 per cent.). Required the value of an amuity (due) on ( 25 ).

The required value here is $\mathrm{N}_{25}: \mathrm{D}_{25}$.
$1: \mathrm{D}_{25} \quad=00655450$
$\Sigma_{25}$ inverted $\underline{487123}$
1966850
131090
6555
4588
524
26
Value required $=2 \overline{21 \cdot 09133}$
$1: 15257=655437$
p. p. for $3=+13$
8. Required now the annuity (due) on (25) that a present payment of $£ 1$ will purchase.

This is $D_{25}: N_{25}$. It conld be found, therefore, by multiplying $D_{25}$ by the reciprocal of $\mathrm{N}_{25}$; but more easily by simply taking the reciprocal of the last result.

$$
\begin{aligned}
& 1: 21092=0474113 \\
& \text { p. p. for } 7=\frac{+16}{} \\
& \text { Annuity required }=0474129=11 \frac{1}{2} d \text {; } ; \\
& \text { or, for } £ 100, £ 4.14 \mathrm{~s} .10 \mathrm{~d} .
\end{aligned}
$$

By this simple process half the columns in Dr. Farr's Tables, pp. 52, 53, and 86, 87, may easily be verified.
9. It appears by the same Table that an annual premimm of $£ 1$, at age 25 , will insura $£ 54 \cdot 6842$ over the whole of life. Required the premium for assurance of $£ 1$.

$$
\begin{aligned}
& 1: 54685=01828655 \\
& \text { p. p. for } 8=\frac{+26}{.01828681}
\end{aligned}
$$

Dr. Farr has here $\cdot 018287$, taking ont the results to only five signifieant figures.
To Professor De Morgan, at whose suggestion the work was undertaken, the Author begs to express his thanks for much valuable advice, kindly given, as to the construction, arrangement, and printing of the Table.
